

**** 2007.08.21**

***** Releases**

Client 8.2.1 made last night. Has changes described last week. - Steve S. will test. Most commands that accept a group argument will accept an environment variable SAM_GROUP.

***** D0**

See mail

DB Reanalysis fixed execution plans of slow queries. Takes 58 hours to do the reanalysis. Maybe we have to do this quarterly (was doing weekly, but turned off since all was well for > 6 months).

Someone somehow was able to insert spaces and a tab character into a dataset name. Steve will ban spaces and tabs for all input of names.

Steve will update and restart all calibration DB servers this week. Update has new version of python, [cx_oracle](#), [OmniORB](#). This will get the [calib](#) DB servers caught up to the same versions that SAM uses.

***** CDF**

See mail

Wednesday - [fcdldata324](#) got a lot of file restore requests - it got the files from tape but didn't serve them out. Had some [dCache](#) problem - pool server program was restarted -- fixed.

Also, DB Browser machine was unresponsive, and this held up uploads. The machine was restarted by an unknown person (Not sure if someone really restarted). All fixed. Randolph will check the [syslogs](#). The upload program uses the DB browser to get the dataset description. Are the [DBB](#) machines on ganglia? Can't find them.

[Nameservice](#) problem fixed by Angela - problem was due to the fact that some old machines were removed from [DNS](#). The [nameserver](#) then does not let go of these machines and gives errors. The defunct machine pruning was not running in integration - should be run (pruning is run in production).

***** MINOS**

See mail.

***** DB**

See mail.

Sept 4 down day will install oracle and [os](#) patches. Perhaps a good day to do start the reanalysis.

***** [enstore/dCache](#)**

Downtime last Thursday for [STKEN](#). Users should see no changes. Some [enstore](#) software updates and rearranged cables on the rack to make things easier to maintain. Replaced a [handbot](#) on the [SL8500](#). No plans for downtime in the near future (may be decided later). On the public [dCache](#), one of the pool nodes [stkendca9](#) was dropping pools (not clear why). Developers asked to check hardware. No anomalies found. Will put it back in and see if it fails. Perhaps running out of file descriptors.

[SRM](#) was restarted at 1800 last night (was a [helpdesk](#) ticket). The pool services said that it was up, but in fact [SRM](#) was in a funny state. Had gone for a couple of weeks without a problem previously.

Date: Mon, 20 Aug 2007 18:03:03 -0400

I'm doing this report as Daria has personal issues to focus to.

A few new UNRESOLVED issues this week :

--- Wuppertal has been suffering from submission problems since Aug. 16 : IT #2943, #2942, #2940, #2939, #2938, #2937, #2936, #2935 and #2923. A lot of email traffic.
--- IT#2941 : "Large numbers of failed jobs on d0cabosg2 seemed to be caused by an authentication problem on d0srv047". Help ?

--- IT#2931 : dataset/file transfer problem with d0farm.hecr.tifr.res.in. Can someone help the poor Nagaraj ?

--- Large no. of large logfiles had made Samgrid down. (IT# 2929, #2928, #2926, #2925, #2922, #2921 and #2910).
--- IT# 2912 : Asking whether the user (Tom Rockwell) still has the problem of setting up new disk --- newly added disk being inactive.

=====

Resolved issues (apart from routine requests) :

--- Some unresponsive complaints around the Tuesday downtime (eg. IT #2909) .
--- Tape problem PRZ205L1 resolved after a couple days. (IT# 2919/2915) .
--- fcp problem with d0srv069 (IT# 2914).

Reply-to: bjb@jhu.edu

Hi,

This is a summary of my SAM shift. Basically, it was quiet until Monday.

Wed Aug 15 12:29:33

There are some errors under upload server for fcdldata321 and fcdldata322 that are still listed

Mon Aug 20 08:23:50

There are problems with CDF-LT03: Bad Movers/Bad Tape

Response from George was: There are errors on 2 of the 4 LSMs in the SL8500 robot. I have paused the CD and CDF LTO3 enstore libs.

Then later: The SL8500 is back up and running. One of the arms had to be replaced.

Mon Aug 20 12:26:00

The hourly e-mail message ns_int nameservice died at fcdforal: status 0 was fixed by Angela

Mon Aug 20 10:39:44

An issue from Vladimir: CDF DH plots showed large backlog in file restores this morning. It turned out that a very large number (hundreds) restores has been scheduled to the pools on one node (fcdldata316). The pools have exhausted the file descriptors and all restores were waiting. I've restarted the pools on this node, the restores in the backlog have been rescheduled to the other nodes and now things seem to go back to normal.

Mon Aug 20 16:28:48

Right near the end of the shift another bad mover (LT03_29) was reported.

Cheers,
Barry

Minos status 2007 Aug 21

General -

Upgraded Minos Cluster and all servers (SAM, Mysql) to SLF 4.4
on Thursday 16 August.

Enstore -

DCache -

Continued occasional stuck pools.
Missing Login List and plots on web since July.

SRM server went down early Monday, still down at 17:00. No estimate.

Slow ROOT DCache reads in root >= 5.12
dCache 1.7.0-39 claims to provide vector I/O, installed on FNDCA
Still need tagged root release supporting this.

SAM -

IT 1894 Need 'sam locate' in C++ API
Users really need this feature.

Oracle -

OPEN ISSUES

IT 1894: sam locate via C++ api, for simple client needs
IT 1979: Compiler warnings from sam_cpp_api
IT 2071: quadratic project startup time growth (from Nov 1 2005)

PLAN -

Migration to 9940B tape can proceed anytime - when ?
Update Minos dbservers and clients to v8

From: Anil Kumar <akumar@fnal.gov>
Subject: DB Report
To: sam-design@fnal.gov
Date: Tue, 21 Aug 2007 08:43:00 -0500

D0 :

- Scheduling July's DB patch and cumulative OS patches on d0ofintl and d0ofprdl Sep 4.
- Scheduling OS patches on d0oral this week.
- Query Slowness on d0ofprdl was due to Google crawlers. Steve W. restricted the access.
Schema was analyzed.
- SAM cut v6_10 on d0ofdev1 - To add composite index on lower(file_name) and retired_date
- Cut v6_19 of sam_db_seed_data and installed on d0oral.
(composite index on lower(file_name) and retired_date
- v6_4 index on create_date of data_files against d0ofdev1 done
- Service Request with Oracle on Full table scan Vs Index scan on data_files_param_values.
Development is working on Bug Fix. Bug# 5601578 No time estimate yet for bug fix.
SAR# 5837876.993

Alerts :

CDF :

- Scheduling July's DB patch on cdfofpr2 Date ?

Alerts :

MINOS :

- OS patches and kernel upgrade for minosora1 - Done
OS patches and kernel upgrade for minosora3 - Done
- July's DB patch on minosora1 - done
- The motherboard was replaced on minosora3 on Thursday 06/21/2007
This didn't fix the CPU warnings.
Now on June 26, Sysadmin attempted to make the size of dimms same as per consultation
with dl/sun. Also new kernel has been installed. CPU warnings still exist.
More diagnostics info done on Aug 06
-More work on minosora3 with sun - upgraded sp and BIOS firmware and rebooted
-Now more DIMMS will be replaced in attempt to fix the CPU warnings.
- v6_4 index on create_date of data_files against minosdev - done
