

# VxWorks Support Project Status Update for 9/05/2006

Steve Foulkes, Gerald Guglielmo  
(CD/CEPA/OAA)

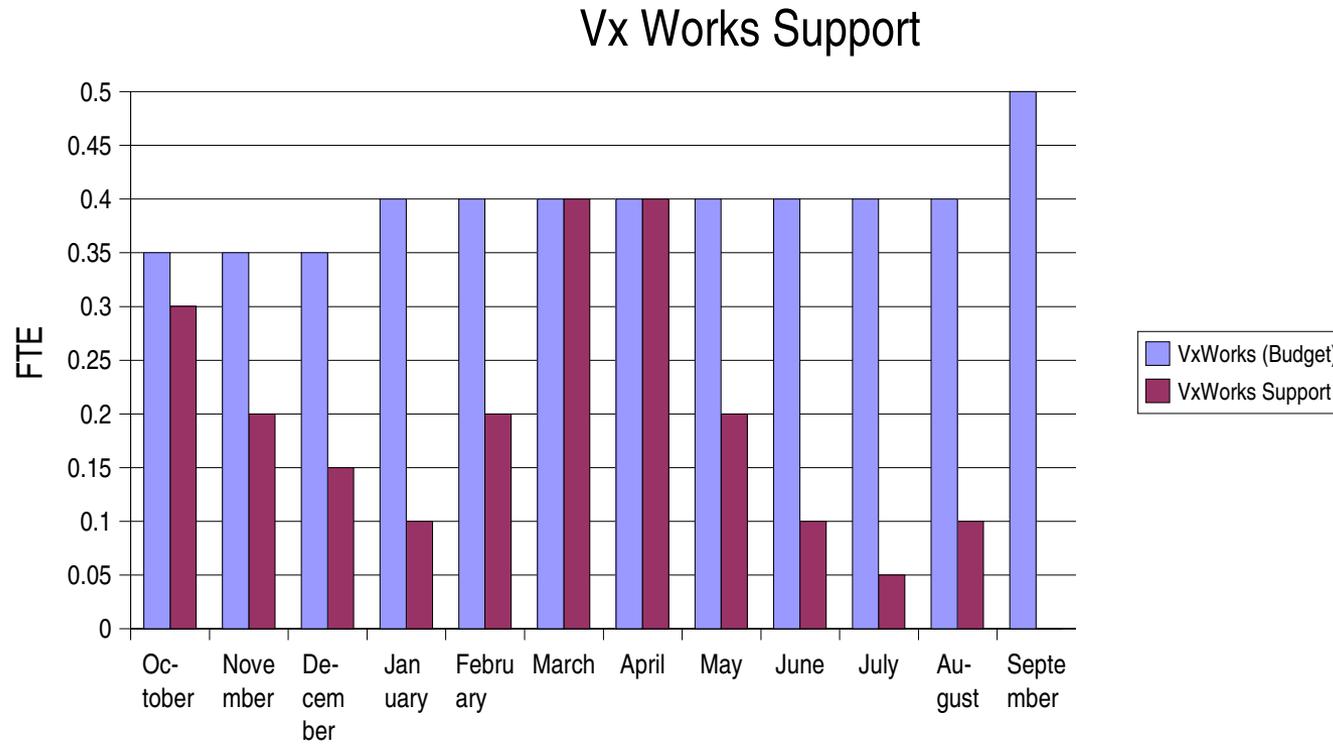

# Project Deliverables Status

- Perform duties of liaison to WindRiver Systems for the laboratory and users
  - Laboratory wide licensing maintenance and renewal (started in August)
  - 3 ELM Licenses, good for a year, expire in September.
  - 500 Production licenses, 300 for AD and 200 for CD
  - TSR filing and tracking as needed
- Support for multiple versions of VxWorks and Hardware combinations
  - Currently support 5.3, 5.4, 5.5 and 6.1 on fndaut
  - Most Motorola PPC Boards (162, 167, 230x, 24xx, 260x, 5500, 6100)
- Evaluate VxWorks 6.1 tools and deploy to users interested
  - Currently installed on fndaut and nova
  - The only issue encountered so far is the lack of support for older boards (MVME230x, MVME162, MVME167)

# Effort Profile VxWorks Support

- 1 Employee for liaison and support activities

# Risks

- Legacy hardware and/or VxWorks versions is a potential risk in terms of effort and supportability.
- Support for new versions and hardware combinations at least temporarily increase support load and could impact other ongoing support.
- New activities or users pose a risk of increased support load.
- Changes in licensing costs or terms could have laboratory wide impact.
