

Joint ADMIN / COM effort on tasks  
March 21, 2010

Here are some more notes about this joint effort.

**A. Make DocDB and SharePoint work together for ADMIN and COM purposes**

**1. DocDB and Sharepoint.**

- a. Project plan to do these things (Vicky has given ok on this)

Before even a project plan, it would be a good idea to develop a brainstorming list of things that might be done in terms of making DocDB and Sharepoint work together for the better integration of DocDB and Sharepoint documents.

- b. View DocDB documents through SharePoint.

It is thought that we know what we mean by viewing DocDB documents through Sharepoint - ideally, one would be able to see the DocDB documents on one's Sharepoint site or desktop or whatever and then, having seen the document name, be able pull it up from DocDB onto the Sharepoint site and begin to work with it.

- c. View Sharepoint documents through DocDB

No one is quite sure what this means so it is probably better that one drop this until one can figure such a thing out.

**2. View internal COM and ADMIN web pages in SharePoint**

- a. Explore options for how internal COM and ADMIN pages could be made accessible in a prototype fashion.

The idea here is to follow up on VWs inward facing and outward facing comments made some time ago. That is, there are some COM and ADMIN web pages that are really meant for consumption by people in CD. Given that, is there a way we should make those web pages visible only in Sharepoint rather than having the publically available on the web - it always seems strange to have "internal" pages that are publically available. If that is true, what does it mean to call them internal and doesn't this confuse people?

- b. Serious production use is to be on backburner until SharePoint is really in production and templates and structure are available.

NOTED.

**3. Learning SharePoint with the intent of ADMIN and COM...**

- a. being able to teach and/or  
b. being able to learn how to how to train,

c. being able how to use as is occurring now.

What is thought is meant by the above is to be able to train, document in the use of, etc., Sharepoint now in the same way that we have been doing such things for XMS. At least that is one idea.

- B. Develop Metrics for COM and ADMIN information displays following the KPI approach used by Fang
- C. Develop Metrics for Service Desk
