Approved. I think this was a well run project. Good work.
Jon

John and Mike,

The close-out and lessons learned documents are now finished for the WordPress SaaS project. They are in CS-doc-5515-v6, and I attach the close-out report here for your approval.

What I have been doing lately about signatures is accepting email messages from the approvers and filing an image of the emails in DocDB as the record of approval. If that's all right with you, that's what I'll do in this case as well.

I've read it and I approve.

I know that we went slightly over in the effort category, but as a result of this project we were also able to deliver a MariaDB/Galera HA database cluster that we are also now using for VOMS and GUMS, with other databases moving in soon. It's a great spinoff we hadn't anticipated.
