

Housing Policy for Workflow Operations for Distributed Computing Visitors Effective March 1, 2015

Fermilab's Scientific Computing Division (SCD) manages a visiting scientist/intern program in the Workflow Operations for Distributed Computing Group to provide real world experience in running large scale computing operations.

As part of the program, SCD provides housing for the visitor. The housing that is provided will be one single-occupancy room in a three-bedroom house on Fermilab property that is shared with other visitors in the program. There is a shared kitchen, bathroom, and living area. If this house is currently fully occupied, SCD will find an alternate arrangement until such time that a room becomes available.

Fermilab safety policy limits the total number of tenants in the house to 4. Thus each visitor may have short term guests, limited to two-week stays, provided all other housemates agree. Fermilab housing policy can be found [here](#).
