Subject: Tour Postcards – Request for Comment

The Data Center tour handouts that were prepared for the August 2003 Lepton Photon conference have served their function well. However, they are becoming dated and have some deficiencies – the principal one of which that they provide too much information and lack color and pictures.

To correct this, I have converted them into a abbreviated postcard format. Would you and the relevant people in your Department please review the postcards and give me your comments?

I have attached the postcard directly related to your Department or for those on the cc list, attached a random selection. I still have to produce postcards derived from the Farms and Reconstruction sections of August handouts so don't worry—those missing areas will be addressed. I wanted to get the set so far done out for review rather than waiting for everything to be completed.

Please provide updates to the content and corrections of errors. I am aware of the production errors—mainly alignment—which I will certainly correct in the final version. It's also been pointed out to me that I having used small b (as in Tb-its) when I should be using large B (as in TB-ytes) in a number of places. Please indicate which if you can. Also provide references to info that I can use to update the text and/or links to update pictures and graphics. If you think that an area (e.g., Computing Security) needs its own card, let me know about that as well (GCC and LCC are certainly two).

In closing, be aware that the complete card set in PDF format is at:
